MP 25 for Pools up to 90,000 Litres
MP 40 for Pools up to 150,000 litres

Proudly Australian owned & manufactured

productinfo

The mineral sanitising alternative

Mineral based systems typically use a blend of magnesium and sodium chloride minerals. Although alternative minerals such as potassium chloride, calcium chloride and others may be used. mineralplus can also be used with traditional salt pools. Works on a low mineral level of just 3000 to 3500 ppm. Warranty is a full 3 years with a further 2 years pro rata cell warranty.

BENEFITS.

Minerals enhance your swimming experience by creating a soft and silky feeling to your pool water.

Magnesium is a fundamental mineral for the human body, which means pools based on magnesium tend to be far more gentle on sensitive skin than standard chlorine pools.

Mineral based pools using magnesium can reduce the ability of metals and calcium to cause harsh staining in unbalanced pools.
